To properly size a power valve, take a vacuum reading at idle and if it is above 12" for a standard transmission a 6.5" will be safe to use. For automatic transmissions take a vacuum reading in gear at idle and if the vacuum is below 12" divide that in half for proper size.

There are a few points to make. The modulus operator finds the remainder after an integer divide. The print command output a floating point number on the divide, but an integer for the rest.
